

SmallSat Express

SmallSat Express is the new European launch capability for small satellites, providing a state-of-the-art service at Esrange Space Center in northern Sweden.

Europe's polar gateway to Space

We offer EU mainland's first orbital launch site: Spaceport Esrange. Inaugurated in January 2023, the facility provides full launch capabilities for standardized polar orbits. We have the launch site and the experienced staff needed to take care of all your needs. Make SSC your partner for satellite launches, make Spaceport Esrange your orbital launch site.

Payload and orbit details

The launch service is intended for up to 1000 kg satellites; with primary focus on micro- and mini-satellites. SSC intends to provide rideshare opportunities for CubeSats and smaller payloads. The service will enable orbits suitable for sun-synchronous, polar LEO satellites.
